A study conducted in one of the New York areas to determine time contributed by husbands for household work was recently released.

Husbands told work time -- that is time spent in paid employment, household work and volunteer work -- varied little whether or not wives were employed. Men worked on the average of 65 hours when wives were employed 15 hours or less and 63 hours for those with wives employed 15 hours or more.

Wives worked from 40 to 70 hours depending upon age of children and hours employed outside the home.

Harvey Attends Forestry Camp

The 25th annual Boys Forestry Camp was held during the week of June 22 through June 27, State Forester George W. Dean stated that 98 boys attended camp this year.

The camp is held each year at Holiday Lake located on the Buckingham-Appomattox State Forest. Scholarships were awarded to Virginia boys between the ages of 14-18 years judged the most deserving from the standpoint of activity and interest shown in sound forest conservation practices. The instructors and counselors selected as best campers three outstanding boys who displayed outstanding leadership, initiative, interest, and who also made good grades on their test papers.

Professional foresters from the pulp and paper industry and the Virginia Division of Forestry, and a wildlife biologist from the Commission of Game and Inland Fisheries handled the instruction at Camp.

Bill Harvey, Appomattox High School, attended the camp.

Farmers Should Keep Pay Computation Statements

Producers who earn payments in the voluntary feed grain and wheat programs will receive payment computation statements along with their drafts, J. P. Alvis, Jr., Chairman of the Appomattox County Agricultural Stabilization and Conservation (ASC) Committee, has announced.

He said it is most important for producers to retain these computation statements along with their other farm records. The computation statements provide these important details:

1. Program for which payment is made. (Feed grain or wheat)
2. Both gross and net payment, for entire farm and for individual producer.
3. Planted acres, diverted acreage (if any).
4. Projected yield.

Payment computations. The ASC Committee suggested that producers verify their computations with their farm records before filing them in place. If they have questions, they should get in touch with their County ASC office as soon as possible.

If farm program payments are later adjusted, producers may request information from their County ASCS Office.

Farm program payments for 1970 will begin and are expected to be completed by the end of August.

Final Check In '70 Census

One of the final steps in the 1970 census in rural and small city areas of the southern States is a check by mailmen -- is now under way, according to the U. S. Department of Commerce's Bureau of the Census.

This is the procedure: When census district offices completed their preliminary counts, they turned over to the post office a set of white cards listing every address canvassed. The mailmen, in turn, check these addresses against the households on their routes. If the mailman discovers what he considers a "missed" address, he fills out a blue card noting this fact. The blue cards are referred to the Census Bureau, which will check them against the census records.

The Census Bureau will check the blue cards turned in by mailmen and then take appropriate steps to provide a complete census count.
